TUSCAN stands apart as a name that deeply understands the needs of people. TUSCAN windows are engineered using Italian technology to withstand the harshest weather conditions. We, at TUSCAN, offer a wide range of uPVC windows and doors. TUSCAN engages in product development, manufacturing and marketing of a diverse range of home products such as window sashes, entrance doors and exterior products. We can be fulfilled with different design and size. The product range is rounded out with complete uPVC system. At TUSCAN, the quality always accords with the most stringent standards of the industry. Our team is dedicated to assisting clients with their needs. We are renowned for supplying the highest quality products, the most accommodating service and the best warranty in the industry with absolutely no compromises. Our technical collaboration with Duroplast, one of the leading manufacturers of uPVC profiles on planet. Our dedicated team has worked passionately to build a reputation as the company delivering best quality products and flawless services.

We value your trust and promise to give you happy memories with every purchase. We want to interpret the friendly, hassle-free buying experience from design to installation for all the clients to make them feel special and self-assured in choosing the right product with us.

Advantages & Qualities

TUSCAN Windows and Doors System

Saves Energy

Energy efficiency is at the front of everyone mind when it comes to new windows and doors and the choice of materials used will impact the warmth and window energy rating of your home. uPVC is a low conductor of heat meaning when fitted correctly it will form a closed air system minimising the heat loss, experienced by non-insulating materials.

Customizable

Typically most UPVC windows, doors and external fascia will come in white. However, developments in the manufacturing process have meant homeowners are no longer limited to not only colour but a series of customisable shapes, styles and imitation effects such as wood grain.

Installation companies and manufacturers can now tailor uPVC products to your desired specifications; meaning windows and doors will outfit perfectly into your home or property.

Security

The security of a property or home is paramount to any window or door installation. This is why uPVC exceeds expectations with an ultra-light yet sturdy frame, used in conjunction with various locking combination and a double glazed pane of glass will prevent an intruder from breaking in.

Weather Resistant

Weathering is a common problem amongst most materials used on the exterior of a property. uPVC windows and doors do not react with water and air and are not susceptible to the natural elements, meaning a longer life span without ageing.

While uPVC can stand up to the weather and requires less maintenance than naturally occurring counterpart materials such as wood, we recommend taking regular care of any external uPVC installations including soffits and facets to ensure their longevity.

Sound Proofing

The uPVC material works in combination with the double glazed window panels to help decrease the amount of noise that can pass into your home. Most uPVC windows and doors should reduce external noise by up to 50% compared to traditional counterparts.

Fire Retardant

The building regulations state that units and frames for windows and doors must be made from fire-rated materials preventing external fire spread. uPVC is also a material required by the building regulations to adhere to the fire safety protocol, meaning the material will keep the primary route open for 30 mins in the event of a fire incident.

Insulation

Energy efficiency is at the front of everyone's mind when it comes to new windows and doors and the choice of materials used will impact the warmth and window energy rating of your home.

uPVC is a low conductor of heat meaning when fitted correctly it will form a closed air system minimising the heat loss, experienced by non-insulating materials.

Low Maintenance

uPVC is a low maintenance material, unlike natural materials which require annual sanding, varnishing and repainting. Windows & doors made from uPVC can last for decades without any sign of weathering, the only upkeep is a wipe down clean with soapy water to prevent staining and remove dirt.

Durability

The material is incredibly tough meaning the frames can cope against the most extreme elements and are not affected by rot and corrosion which is especially advantageous for properties located near the seaside where high salt content can be problematic. The uPVC coating is also protected against ultraviolet (UV) rays which prevent the material from fading in prolonged sun exposure.

Ventilation

UPVC windows can come in various window style configurations providing an efficient ventilation system with effective airflow into a room. An effective window configuration is called 'tilt and turn' which consists of a two-window arrangement which can open in two separate directions providing draft-free ventilation.

When in the tilted position inwards, hot air can escape through the top and side openings while turning the window to open fully can quickly ventilate the atmosphere of an entire room useful for cleaning or refreshing.

Eco-Friendly

The average life span of uPVC windows can range between 40-80 years and are made from mostly recyclable materials to sustain minimal long-term impact on the environment.

When replacing old windows and doors made from uPVC ask your installer if they will be disposed of accordingly to ensure they are recycled and the materials can be reused in other products such as pipes, plumbing fittings and more.

Windows facilitate the entry of natural light indoors. No house can be complete without any windows. They enable the occupants of a house to enjoy the views of the locality. In addition, they serve to keep the house cross-ventilated. As such, houses with ample windows will seldom look gloomy or feel stuffy. You might feel that windows are nothing more than traditional requirements that each house must have. But, this is not true. Increasingly, homeowners are realising the immense value of their windows. In particular, they are becoming aware of how their windows exert a significant influence in the overall look of their homes.

Made to measure windows can eliminate the occurrence of draughts. Homeowners are increasingly looking for ways to make their homes energy efficient. Windows accomplish this by keeping the cold air out and keeping warm air indoors. In certain situations, overheating could be a problem. To nullify this, builders add security ventilation brackets that facilitate the entry of air indoors, while keeping the window secure.

Jemmying windows that shake in their frames is easy. By opting for made to measure windows, homeowners can boost the security of their homes. Windows can easily boost the aesthetic appeal of a house. In their own quiet manner, they can complement the other elements of the house perfectly.

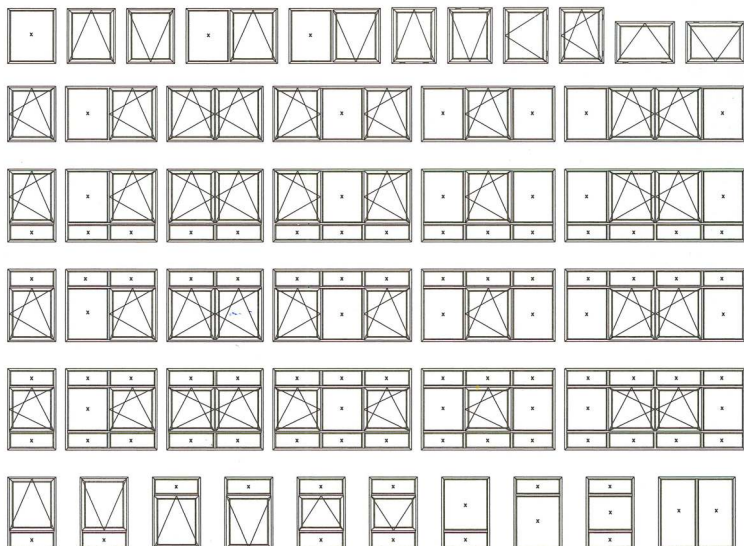

Chart-1	Size Range	
	Sash width (mm)	Max. 850mm
	Sash height (mm)	Max. 1800mm
	Overall frame width (mm)	Determined by sash width and selected type

Protection & Security

Your family is your world and protecting them is an unconscious part of our nature. The need for protection and security is part of our lives. Protecting our material possessions is also important and feeling safe and secure in our homes is as simple as choosing the right windows.

TUSCAN windows high-security hardware and excellent frame strength gives you that peace of mind.

Door

TUSCAN door is a hinged movable barrier that allows entry into and exit from an enclosure. A door's essential and primary purpose is to provide security. In most cases, a door's interior matches its exterior side.

Doors are generally used to separate interior spaces. For convenience, privacy, safety, and security reasons. Doors are also used to secure passages into a building from the exterior, for reasons of climate control and safety.
